

How to join a Zoom meeting via Browser

If you are struggling to join a Zoom meeting, it may be because you are unable to download the Zoom Workplace app. However, you can still join from your browser instead, using the steps below:

1. When you get to this screen, press cancel and then press **'Launch Meeting'**. It will try to open the launcher again, so press **cancel**.

2. Then scroll down on the same webpage and press **'Join from your browser'**, it should then take you to the meeting.
